Outline

VISUAL REHAB FOLLOWING A NEUROLOGICAL EVENT
• Red flags
• Sequence of action
• When should you refer?
• Relationship of eye-brain anatomy to perception/processing

DIAGNOSIS: VISUAL ACUITY & VISUAL FIXATION
• Screening methods
• Treatment and compensation strategies
• Vision fix for the low functioning client
• Advanced technology options

DIAGNOSIS: OCULAR MOTOR ALIGNMENT & DEPTH PERCEPTION
• Determine the diagnosis
• Cover/uncover test
• Assessment, demonstration & lab practice
• Establish treatment protocols

DIAGNOSIS: VISUAL FIELD CUT
• Anatomical review of the visual pathway
• Determine the diagnosis
• Assessment, demonstration & lab practice
• Peripheral test
• Confrontation test
• Establish treatment protocols

DIAGNOSIS: NEUROLOGICAL SPATIAL NEGLIGÉ, NEUROLOGICAL HEMISPHERIC SYNDROME
• Determine the diagnosis
• Differentiate between cut and neglect
• Why is left neglect more common than right?
• Assessment, demonstration & lab practice
• Simultaneous stimulus test
• Pencil and paper screeners
• Neuro handling principles
• Positioning strategies to rehabilitate
• Establish treatment protocols

DIAGNOSIS: VISUAL FIELD CORT
• Anatomical review of the visual pathway
• Determine the diagnosis
• Assessment, demonstration & lab practice
• Peripheral test
• Confrontation test
• Establish treatment protocols

DIAGNOSIS: OCULAR MOTOR ALIGNMENT & DEPTH PERCEPTION
• Determine the diagnosis
• Cover/uncover test
• Assessment, demonstration & lab practice
• Establish treatment protocols

Who Should Attend
• Occupational Therapists
• Certified Occupational Therapy Assistants
• Physical Therapists
• Physical Therapy Assistants
• Speech-Language Pathologists
• Audiologists
• Nurse Practitioners
• Physician Assistants
• Nurses

What to Bring
• Please bring colored pencils, markers, or highlighters.

Live Seminar & Webcast Schedule (Times listed in Central)
7:30: Registration/Morning Coffee & Tea
8:00: Program begins
Lunch: 1 hour (on your own)
3:30: Program ends

Advanced your skills with intensive lab sessions

Don’t Miss!

Visual Rehab After Neurological Events
Seeing the World Through New Eyes

• Differentiation challenges addressed – is it a field loss or neglect?
• Strategies to achieve functional improvements for stroke/TBI clients
• Documentation tips to justify the need for continued treatment
• Evaluation skills for ocular motor skill impairment, visual field loss, visual spatial inattention & pusher syndrome/midline orientation shift
• Recommend interventions for ocular motor, field cut and neglect
• Low and no cost intervention options - for any setting

• Audiologists
• Nurse Practitioners
• Physician Assistants
• Nurses

What to Bring
• Please bring colored pencils, markers, or highlighters.
Feeling lost in determining a treatment plan with a neurological client? Have you asked yourself:

- What is the best evidence-based therapy protocol?
- How do you know if you are facing a field loss or a neglect?
- How do you determine visual function when your client is confused?
- Is this a vision or a cognitive impairment?

Robert has been in that fog and come out the other side with wonderful, functional, and cost- conscience options to show and share. He cultivates that therapy should be specific to the client’s challenge and that requires an astute awareness of the impairment. This insightful seminar provides assessments that are revealed in this course, along with functional treatment interventions to ensure successful therapy sessions. He shares anecdotes and case studies that highlight how the protocols can be put in practice. These stories assist in elevating the inexperienced therapist and communicating with the experienced therapist. The course content is largely interactive and offers numerous lab sessions proving the engaging experience that therapists crave.

Speaker

Robert Constantine, OTR/L, is an expert in visual and neurological rehabilitation with over 20 years of experience guiding patients to recovery from visual disorders that result from brain injury, stroke, and developmental delays. He is a member of the Neuro-Optometric Rehabilitation Society and has over 20 years of experience in guiding patients to recovery from visual disorders that result from brain injury, stroke, and developmental delays.

Objectives

- Articulate the description of ocular motor skill impairment, visual field loss, visual spatial inattention, and midline syndrome.
- Demonstrate competent assessment of ocular motor skills, visual field loss, visual spatial inattention, and midline syndrome.
- Describe the difference between field impairment and neglect.
- Prescribe treatment interventions for ocular motor skills, visual field loss, visual spatial inattention, and midline syndrome.
- Demonstrate effective documentation of assessment and intervention to justify skilled services.
